

Stand number Q61 sees **Flow-Technology Ltd**, a UK based engineering facility in Brighouse - West Yorkshire, again showcasing their product range at Southern Manufacturing 2017.

For over 30 years they have supplied various types of Stainless Steel and High Nickel Alloy components to the Oil & Gas, Power (Nuclear & renewables) Chemical, Pharmaceutical, Cryogenic and Food industries.

The company boasts a large manufacturing facility with significant capacity at its disposal offering the benefit of providing one off customer specified specials up to large batch stock items. All standard items are supplied out of an extensive inventory with the majority of products manufactured in the UK to national and international standards.

The company is committed to Supplying a quality product and has been certified to ISO9001 for over 24 Years. The Quality Management system provides rigorous inspection procedures and continual improvement of product and manufacturing processes. Material certificates supported by full product traceability is supplied free of charge and as a matter of course - other specific documentation such as pressure test reports, welding information or NDE reports will be supplied where applicable.

To support the higher pressure fittings Flow-Technology implement a testing programme to ensure the products meet the high expectations of their applications. Parts are tested to the required safety factors of up to four to one and certificates can be supplied to show this when necessary.

Recent projects have seen the company's products installed in high value applications such as the Sellafield Nuclear power plant, Rolls Royce and the Shah Deniz 2 project in Azerbaijan. These applications require intense quality inspections and high specification materials all of which are presented and supplied by Flow-Technology Ltd backed by the highest quality engineering.

From its conception Flow-Technology Ltd has grown year on year and invested in new equipment and manufacturing technologies to keep it at the forefront of the Stainless Steel component industry in the UK.

Flow-Technology Ltd remains the original name in quality Stainless Steel & High Nickel Alloy pipeline components and hose fittings.

Below is a non-exhaustive list of products and services offered and via various social media links the availability of stock and progress of work in hand can be tracked.

- 10K (689bar) and 15K (1034bar) rated fittings and adaptors.
- 20K (1379bar) and 60K (4138bar) rated fittings and adaptors.
- Other high pressure application fittings.
- BS5200 Hydraulic Connectors and Adaptors.
- Fittings for Hydraulic Hose (including Multispiral).
- Fittings for PTFE Hose.
- Fittings for Hygienic applications.
- BS2464 Suction and Delivery Hose Fittings.
- SAE J514 (JIC) 37° Flare Type Fittings.
- Butt weld Fittings.
- ASA, BS10 and BS4504 Flanges.
- BSP 150lb Screwed Fittings.
- BS3799/ANSI B16.9 3K (207bar) & 6K Screwed and Socket Weld Fittings.
- Carbon Steel Range.
- High Nickel Alloy Range and Specialist Manufacture.
- Pipe, Tube, Plate and Bar.
- A wide range of valves.
- SAE J518 Flanged Heads.
- Coded pipework welding.
- Project Management.

Flow-Technology Ltd, with its base in the traditional heartland of valve and machining technology in the UK, delivers high quality products to demanding requirements with the versatility and service levels expected of a successful manufacturing engineering company.
