

LEWA CONTINUES TO PERFORM IN CHEMICAL INJECTION FOR LITRE METER

UK flowmeter specialist Litre Meter (www.litremeter.com) has presented another award for outstanding sales performance to its US distributor LEWA-Nikkiso America Inc. (www.lewa-inc.com).

With offices in Houston, Texas and Holliston, Massachusetts, LEWA-Nikkiso America is a leading provider of metering solutions for the oil and gas industry. Applications include chemical injection for oil, gas and water treatment; high pressure injection; solar operated chemical injection systems and sealless metering.

Litre Meter CEO Charles Wemyss said: "We have a strong relationship with Lewa in the United States. As AN expert solution provider for chemical injection in oil and gas, Lewa is well-placed in one of Litre Meter's core markets.

"Natural synergies between the companies have allowed us to forge and sustain strong, long-standing trading relationships. The evidence of this is borne out in Lewa's sales performance and we were delighted to present the company with another award."

In July 2014, Charles Wemyss travelled to Houston to present Lewa's sales manager Bob Fletcher with two awards - one for becoming Litre Meter's first \$1 million distributor and a second for outstanding sales performance and maintaining its position as Litre Meter's best distributor.

This new award, presented recently, recognises Lewa as Litre Meter's best distributor in 2013-2014.

Bob Fletcher said: "Litre Meter's products are high quality and perform well in highly demanding conditions. VFF positive displacement flowmeters are ideal for chemical injection measurement and we regularly specify them in our solutions.

"Litre Meter's VFF flowmeter is ideally suited for use in the oil and gas industry and in particular for low flow / high pressure applications.

"Years of experience in chemical injection applications onshore and offshore have confirmed the instrument's capability to reliably measure fluids under extreme conditions of both temperature and pressure."

Notes

1. Litre Meter, based near Buckingham, UK, was established in 1975 and specialises in the custom design and manufacture of instruments for measuring and controlling fluids.
2. The company has particular expertise with offshore and sub-sea flow measurement and has supplied flowmeters for these applications throughout the world. The company's VFF flowmeter was developed specifically for the petrochemical industry.
3. Litre Meter also pioneered the development of the Pelton wheel flowmeter, an accurate and versatile technology that has since been used across many industries to measure a variety of low viscosity materials at both low and high flow rates.
4. The company is also UK distributor for other flowmeter technology including Euromag Electromagnetic, Sierra Thermal, TRICOR Coriolis and Vortex Mass gas flow meters.
5. Litre Meter is part of the Tasi Group of companies which includes AW Lake, KEM
