

Ferguson Group supply a range of a DNV 2.7-1/EN 12079 chemical, acid, cryogenic and bunded tanks, as part of their fluid solutions service. Our tanks come in a range of sizes, can operate to -40°C, have remote vent valves and level guard/safe stick for safe operation.

The cryogenic tanks have a hold time of 25 days, and dual tri-cock valves, with lower roof plates to allow stacking with slings/shackles attached.

The T11 rated chemical tanks have d rings fitted for safety harnesses, and come with a recirculation line or steam heating system.

Our offshore acid tanks are CSC approved for international shipping and they have a top inlet/outlet connection as well as d rings for safer inspection.

All tanks come with spreader beam to assist with easy lifting. Crossover valves are available for easy hookup to existing equipment.

We also offer tank filling, transportation, hookup, emptying and cleaning services.
