

Press Release for AMETEK Creaform

**CREAFORM UPGRADES SPEED AND ACCURACY
OF PIPECHECK PIPELINE INTEGRITY ASSESSMENT SOFTWARE**

New Pipecheck Analyze software module allows remote data analysis

AMETEK Creaform (www.creaform3D.com) has upgraded the speed and accuracy of its Pipecheck pipeline integrity assessment software and introduced a new software module for on-site or remote analysis.

Used in conjunction with the company's HandySCAN 3D Scanner, newly released Pipecheck 2.2 provides a single solution for pipeline corrosion and mechanical damage assessment. It allows NDT (Non-Destructive Testing) service companies to perform rapid, high accuracy evaluations of pipeline degradation and remaining service life. A new surface merging capability allows Pipecheck 2.2 to realign overlapping scans, increasing field productivity.

Creaform also introduced Pipecheck Analyze, a software module designed to address parallel workflow for end users. It allows field technicians to send acquisition data acquired in a ditch to an integrity engineer for detailed analysis.

Creaform develops and manufactures 3-D portable measurement solutions and engineering services. It is a unit of AMETEK Ultra Precision Technologies, a division of AMETEK, Inc., a leading global manufacturer of electronic instruments and electromechanical devices with annualized sales of US\$4.0 billion.
