

LCAMP

The LCAMP is a field service / replaceable amplifier for use with the BLH Nobel KOSD and KIMD range of offshore load cells. It offers 4...20mA output, HART communication for diagnostics and NAMUR error signalling with a choice of a single bridge with single current loop or dual bridge and dual current versions.

A complete amplified load cell attains an IP67 or IP68 protection with ATEX/IECEX approval, combined error of 1% and a response time of 5 ms.

Recent successes have been in cranes, winches, mooring system and tension applications. For bespoke designs, please contact blhnobel.com for further assistance.
